

FAIRMOUNT COVID-19 PREVENTION AND PROTECTION UPDATE

August 14, 2020

Dedicated to Faith, Family & Community

THIRD ROUND OF HEALTH CARE UNIVERSAL TESTING

On August 12, over 200 Fairmount Health Care residents and team members were tested for COVID-19. The results are as follows:

- 212 tested negative
- 3 tested positive
- 7 tests are still pending

Two of the three positive tests came from residents and one was a team member. The residents have been moved into isolation and the team member will quarantine at home.

Three of the six residents that tested positive during the August 4 testing were discharged from isolation. Sadly, one of the six residents passed away. We are grieved that three other residents who had tested positive prior to the August 4 testing passed away this week.

The 15 team members who tested positive on August 4 (this is one additional than what was reported last week due to a delay in receiving the results) were asymptomatic and will return to work next week for their next scheduled shifts. Health Care continues to be the only area where residents have tested positive on campus.

PERSONAL CARE

We were informed this week that a Farm Crest Personal Care team member tested positive for COVID-19. That team member tested negative during Personal Care Universal testing on July 30 and last worked on July 31.

THANK YOU TO OUR DEDICATED TEAM

Weiser's Market in Akron and a team member donated doughnuts for our team members this week. We continue to be appreciative of the tireless efforts of the entire dedicated Fairmount team in all departments who continue to care for our residents with tenderhearted love.

DON'T FORGET YOUR MASK

Please wear your masks when in public, so that it covers your mouth and nose. Also, continue maintaining safe distances in groups and practice good hand hygiene.

PLEASE LET US KNOW

Please inform our administrative team if you come into contact with someone who has tested positive for COVID-19 or who are displaying symptoms of COVID-19. Symptoms include cough, shortness of breath, sore throat, fever, fatigue, muscle soreness and loss of taste and smell.
